SUMMARY

I am Computer Science fresh graduate with hands-on experience in backend development, building RESTful APIs, experience in GoHighLevel (GHL) and managing databases. Skilled in developing efficient, scalable solutions and familiar with frontend technologies and application deployment. Driven to grow professionally, explore new technologies, and strengthen technical expertise.

PROFESSIONAL EXPERIENCE

- Web Developer Intern, 8Con Academy** 04/2025 – 06/2025 | Meycauayan, Bulacan
- Collaborated with the development team to build and present a functional enrollment system prototype, contributing to improved student and course management workflows.
 - Enhanced an enrollment system by developing RESTful APIs, managing databases, documenting backend processes, and resolving bugs with Node.js and Express.js.
 - Designed business funnel websites and configured CRM workflows in GoHighLevel (GHL) to support lead generation, customer management, and business process automation.

EDUCATION

Bachelor of Science in Computer Science, College of Mary Immaculate 2026 | Pandi, Bulacan

SKILLS

Languages

Python, C++, JavaScript, HTML/CSS, PHP

Frameworks

ReactJS, Tailwind CSS, MongoDB

Developer Tools

Git, VS Code, Visual Studio, Postman, Figma

Backend

Node.js, RESTful APIs, FastAPI, Express.js, Flask

AI Tools

Gemini, Claude, Codex

Cloud Platforms

Vercel, Railway, AWS

Methodologies

Agile Development, Scrum, RESTful API Design

RDBMS

MySQL, PostgreSQL

CERTIFICATIONS

Claude 101

Anthropic 2026

Python(Basic)

HackerRank 2026

RELEVANT PROJECTS

Codemia - Interactive Game Learning Platform, College Thesis Capstone | ReactJS, JavaScript, Node.js, RESTAPI Development, Supabase, PostgreSQL, Railway | [codemia.fun](#)

- Developed RESTful APIs and backend logic using Node.js to manage user data and application workflows, improving system performance and data flow.
- Implemented scalable database architecture and deployed services using Railway to support reliable application hosting and efficient data management.
- Collaborated with the team to resolve frontend issues based on user feedback, enhancing usability and overall user experience.
- Integrated Google OAuth for secure user authentication, streamlining the onboarding process and enhancing account security for codemia.

The Tector - NLP-Based Text processing (Spam, FakeNews, SpeechHate), Python, Javascript, HTML/CSS, Flask

- Engineered real-time spam filtering for a mobile messaging application, integrating bots for Discord and Telegram using Flask for backend API communication.
- Built a spam classifier leveraging interpolated n-gram probabilities and smoothing techniques to accurately identify unsolicited messages.
- Acquired and processed large volumes of text data, ensuring data integrity and suitability for training machine learning models in spam detection.
- Built n-gram language models (unigram, bigram, trigram) to improve text analysis accuracy for spam and fake news detection.
